

CSC 161 WEEK 5 TEST STUDY GUIDE

PROFESSOR GODFREY MUGANDA

The test will cover everything we have learned since the beginning of the term, so make sure you consult the study guide for the week 3 quiz as well.

Computer programming is an important skill. There will be more problems like the last problem on the Week 3 quiz, where you are presented with a situation and asked to write a piece of code for that situation.

To prepare, make sure you understand the skills learned in all the labs. You do not have to memorize documentation, as that will be provided for you.

In addition, make sure you understand recursion and you can write recursive solutions to problems similar to those we covered in lecture.

Finally, the concepts we cover on Monday, which will be on sorting and searching, will be on the midterm as well.
