

CSC 160 FINAL EXAM STUDY GUIDE
WINTER 2015

GODFREY MUGANDA

In addition to the concepts on previous study guides, make sure you understand the following concepts:

Exceptions; how to use files using both the `FileReader` and a `Scanner` classes on `File` objects; binary search; recursion (know how to write very simple recursive methods), understand sorting.

Approximately 70% of the final exam will be testing the ability to write code to solve specific programs. The best preparation for this part is to make sure you are able to solve programming problems such as those on the lab exercises. The programming questions on the final will be modeled after those on the Week 8 test.
