

CSC 502 PROJECT 2

PROFESSOR GODFREY C. MUGANDA
DEPT OF COMPUTER SCIENCE

Write a JavaFX program that creates a pyramid of buttons as shown below.

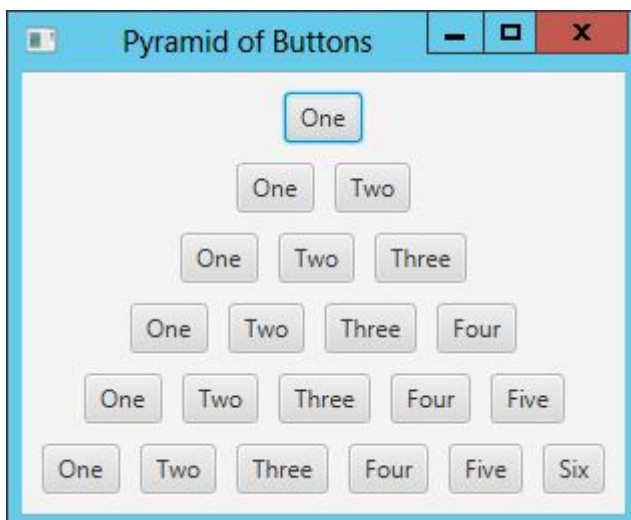

I will accept anything that works, but the ideal solution is one that is written in such a way that by changing a single line of code, say from

```
String [] countLabels = {"One", "Two", "Three", "Four", "Five"};
```

to

```
String [] countLabels = {"One", "Two", "Three", "Four", "Five", "Six"};
```

the program can be made to build a pyramid of a different size:

This is due Saturday night at the end of Week 3.
